QUANTUM THREAT DEFENDER

WHY PLAY QUANTUM THREAT DEFENDER ?

As quantum computing advances, it threatens to break current cryptographic systems that expose critical data, infrastructures, and society to unprecedented risks within the next 5-10 years.

Playing Quantum Threat Defender helps intuitively understand several emerging risks and prepares society to embrace quantum safety, forging resilience, and future-ready security practices.

Quantum Threat Defender is a 2-player strategy-based card game that educates how digital infrastructures are exposed to quantum risks and how can critical assets be protected through layered defenses.

Gameplay progresses through phases: drawing cards, deploying assets, and executing actions. Players engage in tactical decision-making by balancing offensive moves with defensive strategies, while managing limited resources and adapting to dynamic gameplay conditions.

Players build and deploy a 52-card deck across a board consisting of 4 zones (attack, defense, public data, critical data) and tracking scores (stability and quantum points). Players strategically balance attack and defence to protect critical digital assets while targeting opponents. During an attack, damage flows sequentially through defence layers, with dynamic mechanics like combos, resource limits, and events such as *Quantum Collapse* introducing strategic depth and unpredictability.

GAME ELEMENTS

1. Cards Deck (52)
   - Attack cards (13)
   - Defense cards (13)
   - Public data cards (13)
   - Critical Data cards (13)
2. Game Board

Play Duration: 30 minutes
Players: 2

LEARNING OBJECTIVE

- Develop cognitive and strategic skills such as strategic thinking, risk management, systems thinking, resource management, adaptability, decision accountability.

MARKET/AUDIENCE

- **Primary:** Cybersecurity Professionals & IT Managers, Board Members & C-Suite (CIOs, CISOs, CROs).
- **Secondary:** Consulting firms, Think-tanks, Researcher & Innovation professionals who enjoy honing future skills.
